Precise delivery of zinc in every granule

Give your crops and pastures the benefit of a precise nutrient treatment with Granulock® Z. Granulock Z is a compound fertiliser, with each nutrient contained within every granule.

This uniformity of nutrient distribution is particularly important for supplying maintenance rates of zinc evenly to crops at planting.

With Granulock Z, you can effectively provide newly sown crops and pastures with the right combination of nutrients for strong early root growth, healthy emergence and even crop growth.

Why choose Granulock Z?

Precise delivery

Having each nutrient in every granule ensures that every plant is individually supplied with zinc as well as the other elements it needs.

Strong start

Granulock Z delivers a carefully balanced formulation of starter nutrients to promote vigorous establishment.

Available sulphur

Each granule of Granulock Z contains sulphate sulphur that is immediately available to your young plants.

Blending flexibility

Granulock Z can be blended to create specific nutrient ratios appropriate to your soil test results. Blends of Granulock Z can deliver between 0.3% zinc and 1% zinc, with zinc in every granule.

The ideal balance for strong establishment

Nitrogen	Phosphorus	Potassium	Sulphur	Zinc
11.0%	21.8%	0.0%	4.0%	1.0%

Where to use Granulock

Granulock Z is particularly valuable for supplying zinc to newly sown crops and pasture in the following situations:

- ✓ On alkaline or calcareous soils.
- ✓ When soils are wet and cold.
- ✓ Where there is a reduced population of **arbuscular mycorrhizae fungi** (AMF) in the soil.
- ✓ Where sulphonylurea herbicides are used.
- ✓ On soils with a low total zinc status.

How to apply Granulock Z

Granulock Z is best applied in a band with the seed at planting, where new roots can easily access the nutrients.

Using Granulock Z with Intake®

Combining the precision of Granulock Z with Intake fungicide at sowing will help promote growth and protect against a complex of diseases in wheat, barley and canola*. Granulock Z is available with a coating of Intake Combi Sapphire already applied.

* Please refer to the Intake label for further details

- Precise delivery
- Strong start
- Available sulphur
- Blending flexibility

Find out what your soil needs.

Our Nutrient Advantage[®] soil and plant tissue testing service is well named. For 50 years, we have been helping farmers gain an important advantage through dependable nutrient analysis and (if you ask us for it) expert, objective recommendations based on your local conditions.

The result is that less fertiliser is now being used to produce higher average yields than in the past all over the country.

Targeted blends are very cost-effective when you know exactly what your plants need, so why not give yourself that advantage?
