

SUPERFECT®

THE BALANCED PHOSPHORUS & SULPHUR PACKAGE

- A balanced supply of phosphorus, sulphur and calcium
- Improves feed quality and quantity
- Granulated for easier storage, handling and spreading
- Immediate plant availability
- More evenly sized granules provide improved accuracy at spreading.

Find out what your soil needs

Our Nutrient Advantage® soil and plant tissue testing service can help you use SuPerfect more effectively. For 50 years, we have been helping farmers gain an important advantage through dependable nutrient analysis and (if you ask us for it) expert, objective recommendations based on your local conditions.

Targeted blends with SuPerfect are very cost-effective when you know exactly what your plants need, so why not give yourself that advantage?

Helping to maximise pasture growth

SuPerfect® is a high quality granulated superphosphate fertiliser exclusively manufactured by Incitec Pivot Fertilisers in Geelong and Portland.

Ideal for top-dressing grass and legume pastures, SuPerfect combines the proven nutrient value of superphosphate with the handling advantages of a high quality granule. Compared to traditional superphosphate, SuPerfect is easier to store, transport, blend and spread.

SuPerfect provides a balance of readily available key nutrients such as phosphorus, sulphur and calcium for superior pasture performance.

Why choose SuPerfect?

A great product for great pasture

SuPerfect is ideal for clover-based pasture production. The Hamilton long-term phosphate trial showed that consistently using single superphosphate (SuPerfect) will improve the quality of pasture and support higher stocking rates.¹

Plenty of sulphur

SuPerfect delivers a higher ratio of sulphate sulphur to phosphorus than many other pasture fertilisers. Sulphur is critical for pasture based legume systems with recommended annual applications of 10–15kg sulphur per hectare per year.

Readily available nutrients

As well as providing sulphur in the plant-available sulphate form, SuPerfect contains orthophosphate, an inorganic form of phosphorus which is water soluble and plant available.

Analysis

Phosphorus	Sulphate sulphur	Calcium
8.8%	11%	19%

More even distribution produces more even growth

The relatively even size of SuPerfect granules provides excellent nutrient distribution to encourage uniform and healthy plant growth.

Less dust

As a granulated product, SuPerfect tends to have harder granules that are less prone to breaking down into dust than traditional single superphosphate, this generally leads to less fine particles and a wider spread width that can make spreading faster.

Getting the best out of SuPerfect

✓ Spreading before the break

By applying SuPerfect before the autumn break, you give your pastures access to both phosphorus and sulphur as soon as they start growing, promoting excellent root growth and early seedling vigour.

applying SuPerfect with other nutrients such as muriate of potash or trace elements will enhance pasture production.

✓ The value of higher rates

As the graph below shows, using higher rates of SuPerfect can improve the composition of pasture. Low quality feed like onion grass and wallaby grass fall out of the mix as improved pasture species like clover and ryegrass increase.

✓ Monitoring levels of nutrition

Regular soil and plant tissue testing helps ensure that your fertiliser program matches your pasture's needs. Using the test results as a guide, you may find that

How higher rates of SuPerfect improve the pasture profile
